Family Firms are widespread in ▶ India and across the ▶ Developing World

Can Import Competition Close the Productivity Gap?

1. **Collect new firm-manager matched data** to identify **family-managed firms** in India
2. **Natural Experiment:** large, product-specific import competition shock
3. **Quantitative Framework:** embed management choice in a Melitz model

Can Import Competition Close the Productivity Gap?

1. **Collect new firm-manager matched data** to identify **family-managed firms** in India
 - Predominant form of firm organization in developing countries (Bertrand & Schoar, 2006; Lemos & Scur, 2019)
 - Misallocation of talent \implies smaller, less efficient (Bloom et al. 2012; Akcigit Alp and Peters 2021).
 - Follow-up work (Bloom et al., Forthcoming): family firms have worse management practices
2. **Natural Experiment:** large, product-specific import competition shock
3. **Quantitative Framework:** embed management choice in a Melitz model

Can Import Competition Close the Productivity Gap?

1. **Collect new firm-manager matched data** to identify **family-managed firms** in India
 - Predominant form of firm organization in developing countries (Bertrand & Schoar, 2006; Lemos & Scur, 2019)
 - Misallocation of talent \implies smaller, less efficient (Bloom et al. 2012; Akcigit Alp and Peters 2021).
 - Follow-up work (Bloom et al., Forthcoming): family firms have worse management practices
2. **Natural Experiment:** large, product-specific import competition shock
 - Event study design: competition induces family firms to **delegate management to professionals**
 - Within-firm productivity gains (Hicks 1935; Leibenstein 1966; Backus 2020; Pavcnik 2002; Chen and Steinwender 2021)
3. **Quantitative Framework:** embed management choice in a Melitz model

Can Import Competition Close the Productivity Gap?

Removal of Quantitative Restrictions (QRs): Large, Product-Specific Trade Shock

1950s- India used **Quantitative Restrictions (QRs)** to protect domestic firms

1990s: First-generation reforms in 1991 removed some QRs; many remained

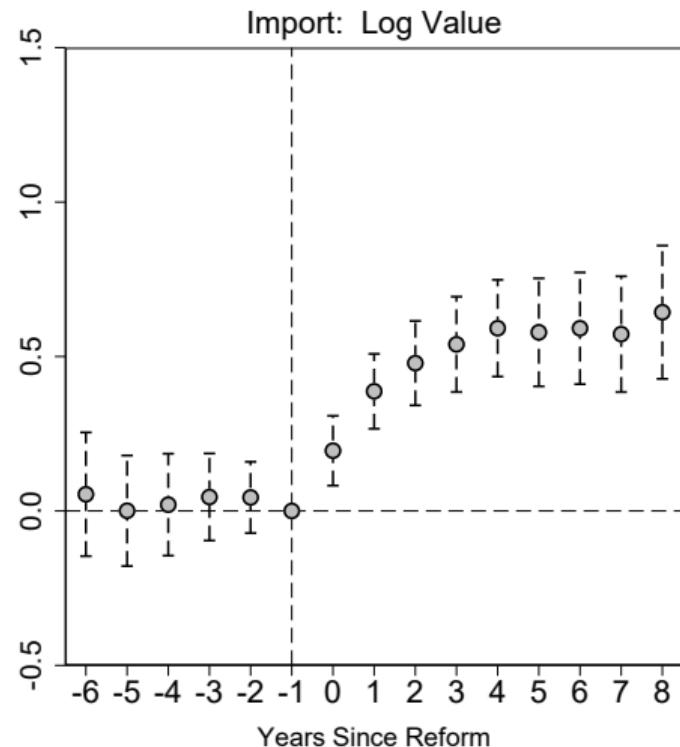

- Mostly final consumer goods
- 3000 HS 8-digit products, almost 30% of all tariff lines
- QRs continued by exploiting GATT rule XVIII:B (QRs on weak BoP grounds)

1998: Second generation WTO-imposed reforms: removal of all remaining QRs

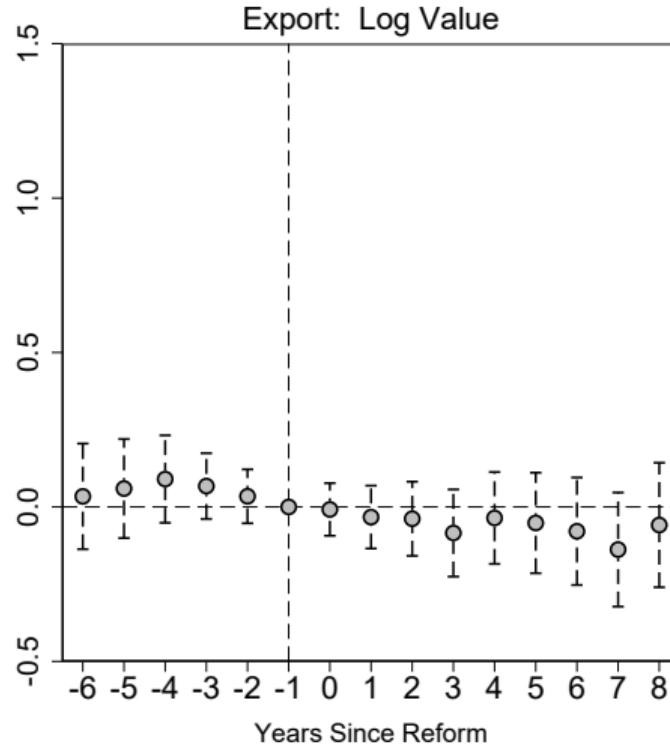

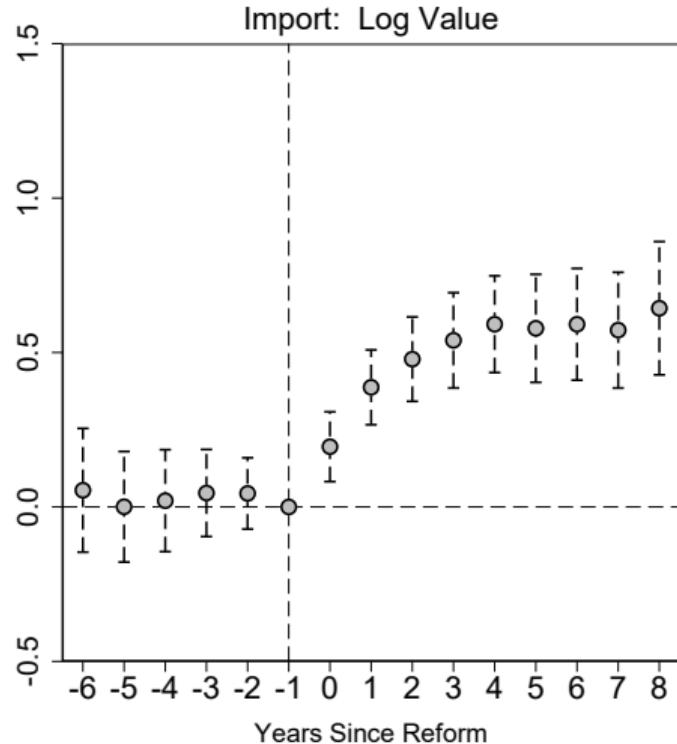

- After complaints to WTO in 1997 from US and EU

2000s: Imports of liberalized products soared after the reform. No impact on exports.

QR-Removal: Imports Soar, No Effect on Exports

QR-Removal: Imports Soar, No Effect on Exports

Note: FEs: year, 6-digit product, 4-digit product \times year

Identification and Key Estimates

$$\Theta = \{\sigma, k, f, \gamma, \mathcal{B}\}$$

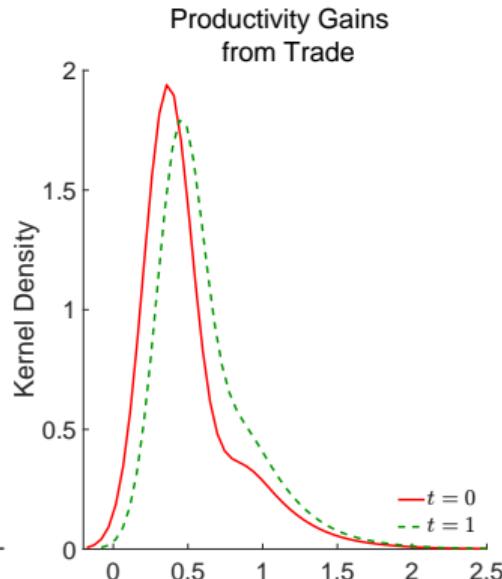

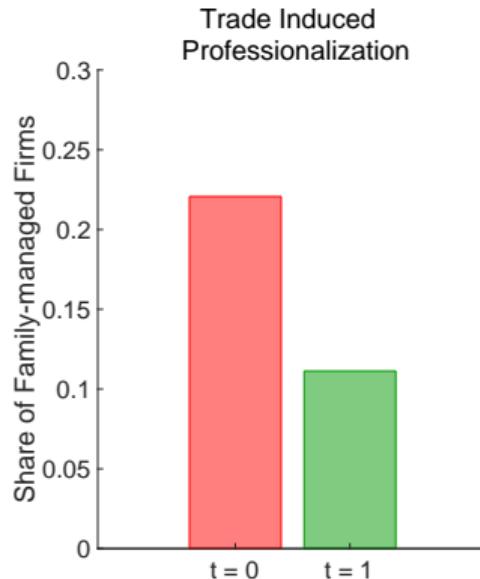

- $\sigma = 4$
- $k = 3.5 \rightarrow$ upper-tail slope in a log-rank vs. log-productivity QQ plot ▶ Head, Mayer, Thoenig (2014)
- \mathcal{B}, γ, f jointly determine management choice and exit ▶ Moment Conditions
 - $f \rightarrow$ Share of firms with negative profits
 - ◊ $\mathcal{B} \rightarrow$ Share of family-managed firms
 - ◊ $\gamma \rightarrow$ Difference in mean log revenue of family and professional firms ▶ Data

Key Estimates

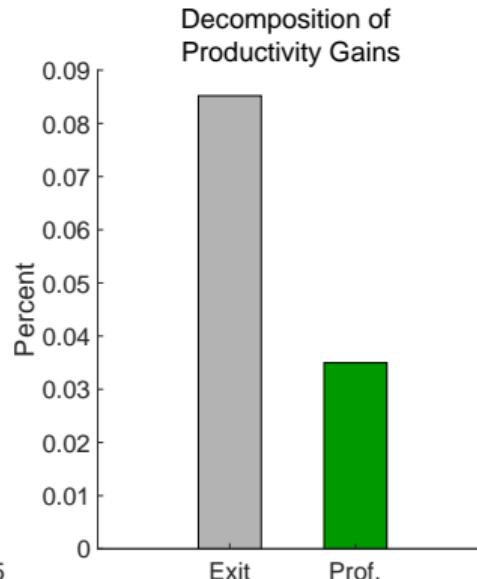

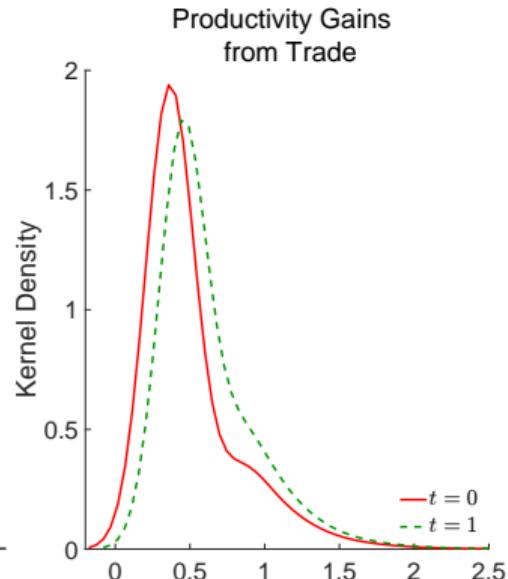

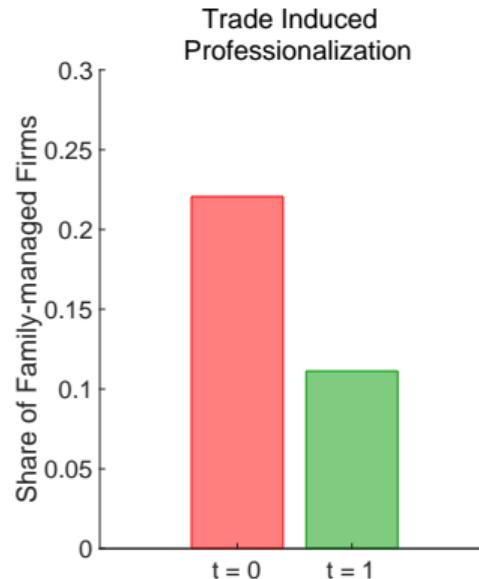

$$\mathcal{B} = 0.05 \quad \gamma = 1.22 \quad f = 0.03$$

(Profits: 25 $p = 0.005$; 50 $p = 0.012$ Mean = 0.16; 75 $p = 0.08$)

Import Competition \implies 12% \uparrow **Productivity**: $\frac{1}{3}$ from Professionalization

Import Competition \implies 12% \uparrow Productivity: $\frac{1}{3}$ from Professionalization

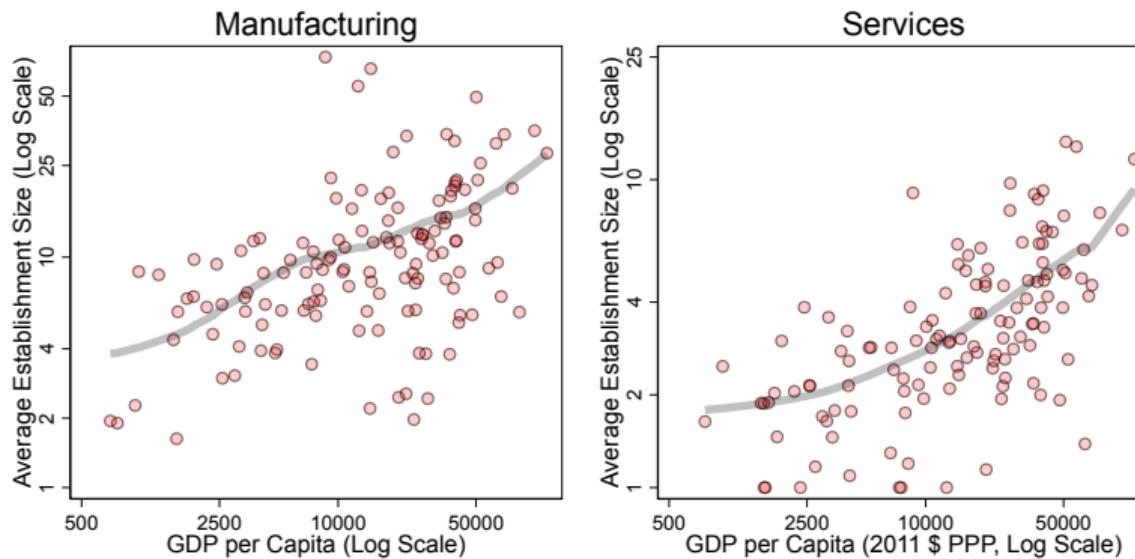

► Details

Conclusion

- Import competition can drive within-firm productivity changes through managerial reorganization
- Large, product-specific import competition shock + novel data on the internal firm organization
- Indian family firms respond to import exposure by professionalizing management
- Globalization is a powerful force that can blunt the effect if taste-based discrimination leading to efficiency gains.

Thank you!

X-Inefficiency

*"monopoly... is a great enemy
to good management"*
– Smith (1776)

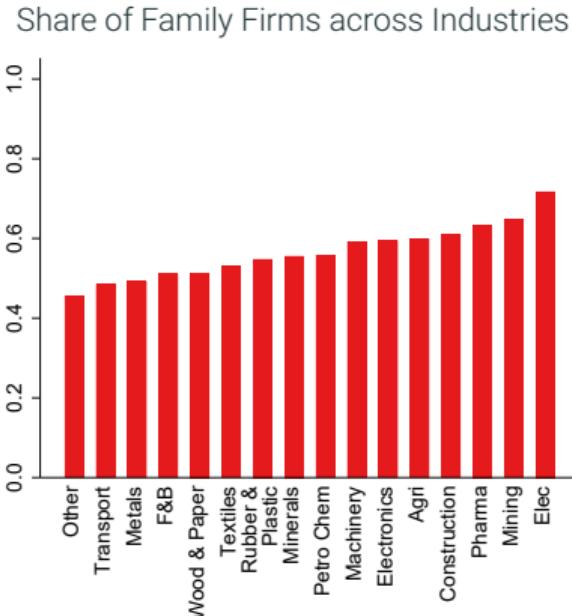

*"the best of all monopoly
profits is a quiet life."*
– Hicks (1935)

*"trade enhances competition, inducing
firms to produce more efficiently."*
– Bernanke (2007)

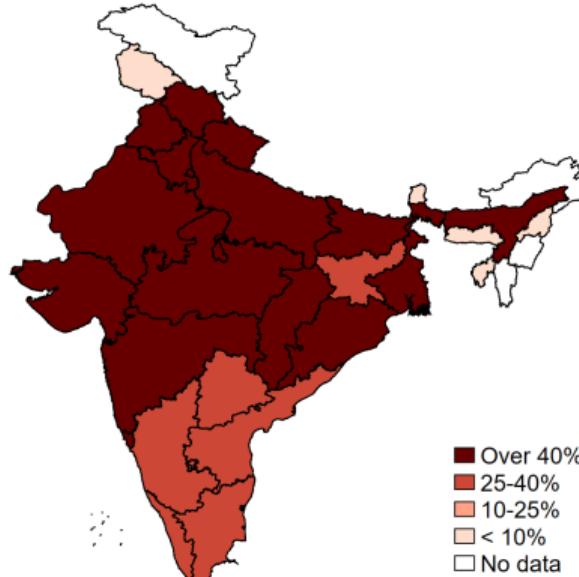

- Alfred Marshall later echoed a similar view, noting that many firms postpone productivity-enhancing changes until external forces compel them *"to exert themselves to the utmost to invent improved methods"* (Marshall, 1926)

Indian Response to WTO's QR Ruling

"The commerce secretary had written to me to say that they intended to make a case for continuing with QRs on consumer goods for BOP reasons, and he wanted confirmation of support from the Ministry of Finance. I promptly wrote back to say that it would be against our national interest because it painted a picture of helplessness that was completely contrary to what we in the Ministry of Finance were projecting to foreign investors."

Excerpt from "Backstage: The Story behind India's High Growth Years, Montek Singh Ahluwalia"

◀ Back

Removal of quantitative restrictions on all imports to transform Indian market

Removal of quantitative restrictions on all imports will transform the Indian market like never before.

PROFUSION OF CHOICE: Shelves like these in a Chennai super store are getting stacked with an array of foreign products

Amma Naana Super Store, TTK Road, Chennai: Heinz spaghetti with sausages in tomato sauce, 220 g for Rs 155; H-Vollmilch low-fat milk with one-year shelf life, 1 litre for Rs 66; Sugar-free chocolate biscuits, 184 g for Rs 98...

Rustom Stores, Colaba, Mumbai: Blue Bunny ice cream, 1.5 litre for Rs 425; St Martin's iced tea, 240 ml for Rs 25; Langnese honey, 500 g for Rs 165

Steak House, Jor Bagh, Delhi: Lake land mayonnaise, 450 g for Rs 98; Laughing Cow cheese, 180 g for Rs 45...

A sample of goodies on the shelves of stores in the three metros on April 3, two days after India abolished all quantitative restrictions (QRs) on imports. On payment of customs duty, anybody can now import any amount of any product. A freedom of economic choice that comes a full 54 years after the freedom of political choice the country attained in 1947.

Indian Response to WTO's QR Ruling

"The commerce secretary had written to me to say that they intended to make a case for continuing with QRs on consumer goods for BOP reasons, and he wanted confirmation of support from the Ministry of Finance. I promptly wrote back to say that it would be against our national interest because it painted a picture of helplessness that was completely contrary to what we in the Ministry of Finance were projecting to foreign investors."

Excerpt from "Backstage: The Story behind India's High Growth Years, Montek Singh Ahluwalia"

Unusually Narrow Scope of the 2001 Trade Reform

- Variation in import competition across the **product space** and time
- **Externally imposed**: hinged on IMF technical assessment of India's BoP
- No concurrent domestic deregulation → **isolate trade reform** impact
- No change in export policy → **isolate import competition** impact
- Affected mostly **consumer goods**: limited impact on firms' input costs

Industry × Year FE	✓	✓
Observations	24356	22096

Environment: Details

- Monopolistic competition with CES demand, heterogeneous firm productivity, z_i
- Technology: constant marginal cost with a fixed overhead cost: $\ell_i = w(f + y_i/z_i)$
- Prices: constant markup over marginal cost
- Profits: $\pi_i = Az_i^{\sigma-1} - wf$ (where $A = \frac{1}{\sigma} \rho^{\sigma-1} Y P^\sigma w^{1-\sigma}$ = market demand)
- GDP is a CES aggregate of N intermediates: $Y = \left(\sum_{i=1}^N y_i^{\frac{\sigma-1}{\sigma}} \right)^{\frac{\sigma}{\sigma-1}}$
- Firms produce unique intermediate varieties
- Prices: $p_i^* = \frac{\sigma}{\sigma-1} \cdot \frac{w}{z}$

Productivity Thresholds

$$\pi(\textcolor{red}{z}) = 0 \implies \textcolor{red}{z}_f = \left(\frac{wf}{A} \right)^{\frac{1}{\sigma-1}}$$

Exit Threshold: Fam Firms

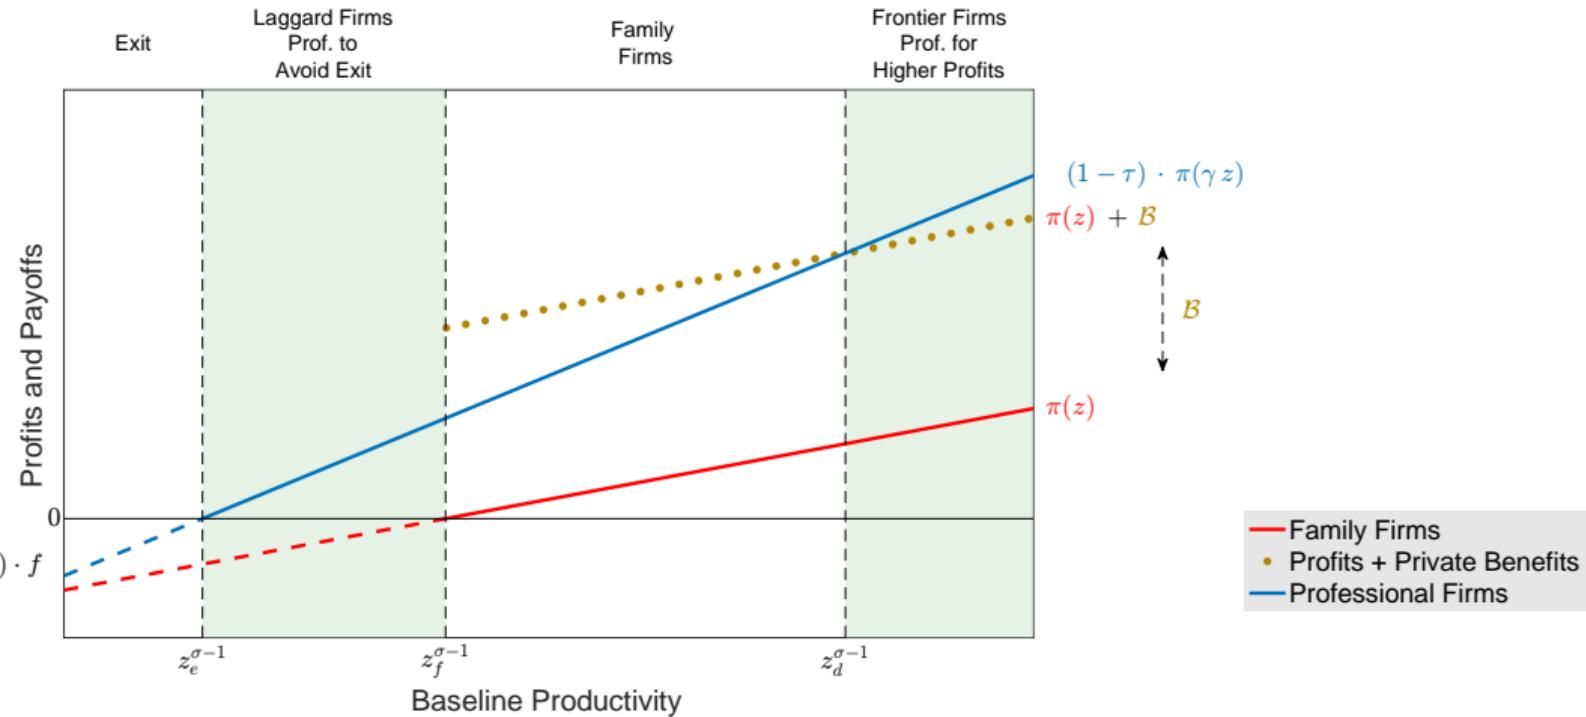

$$\pi(\gamma \textcolor{red}{z}) = 0 \implies z_e = \frac{1}{\gamma} \cdot \textcolor{red}{z}_f$$

Exit Threshold: Prof. Firms

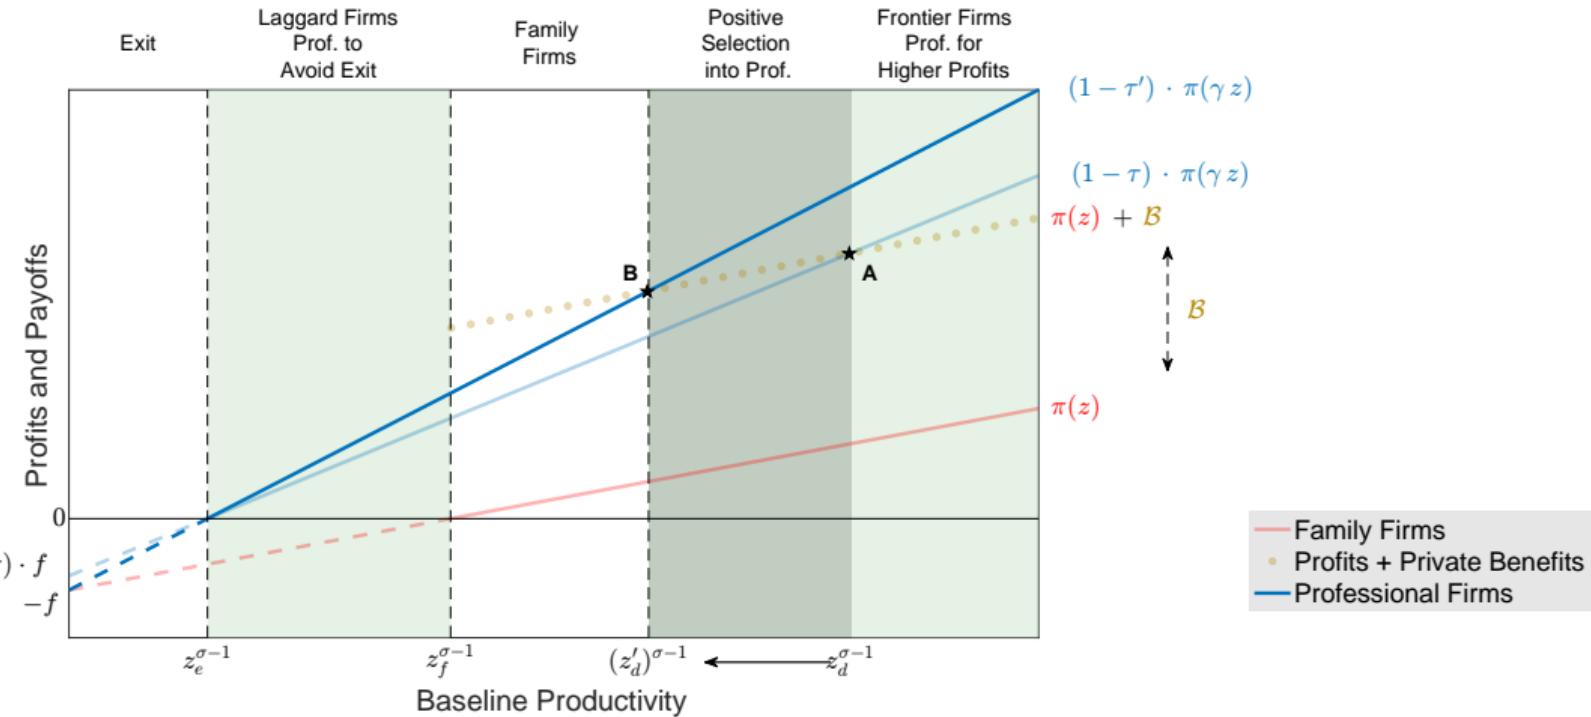

$$\pi(\textcolor{red}{z}) + \mathcal{B} = \pi(\gamma \textcolor{red}{z}) \implies z_d = \left(\frac{\mathcal{B}}{wf(\gamma^{\sigma-1} - 1)} \right)^{\frac{1}{\sigma-1}} \cdot \textcolor{red}{z}_f$$

Prof. Threshold

Contracting Frictions

Contracting Frictions

Profits After Trade Liberalization ($t = 1$)

- Switching from professional to family management incurs (reputational) cost κ ▶ Example
- Payoff $(z, \mathcal{P}_0, \mathcal{P}_1) = \mathcal{P}_1 \pi(\gamma z) + (1 - \mathcal{P}_1) [\pi(z) + B - \kappa \mathcal{P}_0]$
- When $\mathcal{P}_1 = 1$ (the firm upgrades management in $t = 1$), the payoff is $\pi(\gamma z)$ regardless of the past choice
- When $\mathcal{P}_1 = 0$ (the firm is family-managed in $t = 1$), the payoff is:
 - $\pi(z) + B$ if it was family in $t = 0$ (i.e., $\mathcal{P}_0 = 0$)
 - $\pi(z) + B - \kappa$ if it was professionally-managed in $t = 0$ (i.e., $\mathcal{P}_0 = 1$)

Infosys CEO resigns after long-running feud with founders

By Samantha Karen Nair and Sankalp Phartiyal

August 18, 2017 3:58 PM GMT+1 · Updated 8 years ago

Aa

BENGALURU/MUMBAI (Reuters) - Vishal Sikka, the chief executive brought in to turn around India's Infosys three years ago, resigned on Friday, blaming a "continuous drumbeat of distractions" and a long-running row with the founders over company strategy.

Sikka's resignation spooked investors in India's second-biggest IT services company and sent its shares down nearly 10 percent, wiping \$3.45 billion off its market value. The stock touched its lowest level since the start of Sikka's tenure.

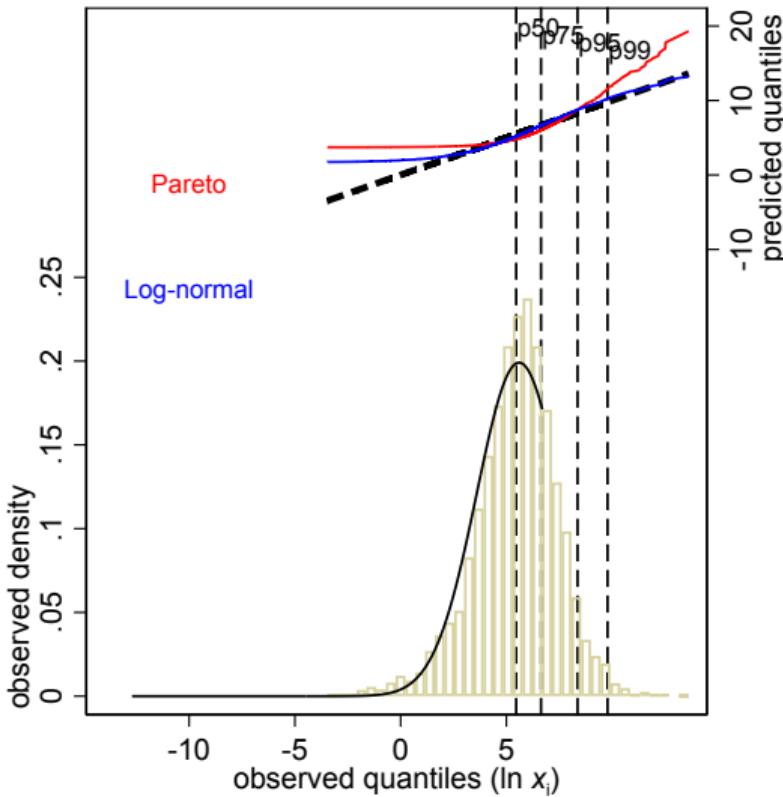

◀ Environment

◀ Profits After Trade

◀ Model: Comparative Statics

Calibrating the Pareto Tail (k)

- **Sample.** Rank firms by revenue, keep 95th–99th pct.
- **Transform.** F_i = empirical CDF $\Rightarrow z_i = -\ln(1 - F_i)$ (linearizes a Pareto tail).
- **QQ-regression.** $\ln x_i = \alpha + \underbrace{\beta}_{=(\sigma-1)/k} z_i + \varepsilon_i$.
- **Result.**
 $\hat{\beta} = 0.87 \Rightarrow \hat{k} = \frac{\sigma - 1}{\hat{\beta}} = \frac{3}{0.87} \approx 3.5$.
- **Robustness.** Cut-offs from 95th to 99th give $k \in [3.4, 3.6]$ ✓

QQ-plot of $\ln x_i$ (log revenue) against $z_i = -\ln(1 - F_i)$ for the top

Analytical Moment Conditions for β, γ

- Difference in mean log revenue of family and professional firms:
$$(\sigma - 1) \log \gamma + \log \left[\frac{\gamma^{-(\sigma-k-1)} - 1 + \delta^{\sigma-k-1}}{\gamma^k - 1 + \delta^{-k}} \cdot \frac{1 - \delta^{-k}}{1 - \delta^{\sigma-k-1}} \right]$$
- Share of family-managed firms: $\gamma^{-k} (1 - \delta^{-k})$

$$\text{where } \delta = \left[\frac{B}{f(\gamma^{\sigma-1} - 1)} \right]^{1/(\sigma-1)}$$
